

Image depicts a screenshot of the NSW Base Map web service

Web service description

The NSW Base Map web service depicts a map of NSW using layers from the Digital Topographic Database, the Geocoded Urban and Rural Addressing System database and the Digital Cadastral Database. This includes:

- roads
- points of interest
- localities
- landform
- drainage
- cultural data
- parks and forests
- property boundaries
- street address numbers.

Web service uses/fitness for purpose

This web service allows users to easily integrate a NSW base map into Open Geospatial Consortium (OGC) compliant spatial platforms and applications.

This web service provides an ideal base map depicting a combined view of NSW Foundation Spatial Information for use within spatial applications and systems.

Current State

This web service is current and complete.

Update frequency

As required.

Future development

This web service is updated when new information has been captured or sourced by DCS Spatial Services.

Standards and specifications

OGC compliant and suitable for consumption by common GIS platforms.

This dataset is compliant with the NSW Foundation Spatial Data Framework and its specifications.
